ApnoMart — Executive Insights & Strategic Recommendation

Analyst: Shyam · Tool: Python (Pandas, Matplotlib, Streamlit, Plotly) · October 2026

Scope note: The task template requests Q2 2026, but the supplied source spans 01 May 2026–28 Oct 2026. This report uses all 1,200 provided rows and is not Q2-only.

Executive snapshot

Metric	Result
Total Sales	■16,261,998.30
Total Profit	■4,419,736.17
Unique Orders	1,200
Quantity Sold	6,736
Weighted Profit Margin	27.18%
Loss-making orders	61
Loss on negative-profit rows	■82,743.74

Insight 1 — Revenue pattern

Pattern: Furniture is the largest sales category, generating ■3,518,270.00 (21.63% of sales). The strongest month by sales is 2026-07, with ■2,957,618.40.

So what: Protect the leading category's availability and use monthly demand patterns to plan inventory and campaign timing rather than applying the same budget every month.

Insight 2 — Profitability pattern

Pattern: Office Supplies generates the highest category profit at ■1,176,657.32 (weighted margin 34.80%). Electronics has the lowest weighted category margin at 18.88%. 61 orders have negative recorded profit, with combined loss of ■82,743.74.

So what: Review product costs, pricing and discounts in the low-margin category and investigate loss-making order lines. The data does not establish that discounts caused every loss, so test that relationship at order/product level.

Insight 3 — Customer behavior pattern

Pattern: Corporate leads customer segments by sales at ■4,311,027.50 (26.51%). Cash is the leading payment method by sales at ■3,574,076.95 (21.98%).

So what: Maintain a strong experience for the largest segment, test targeted repeat-purchase campaigns across other segments, and keep all major payment options reliable.

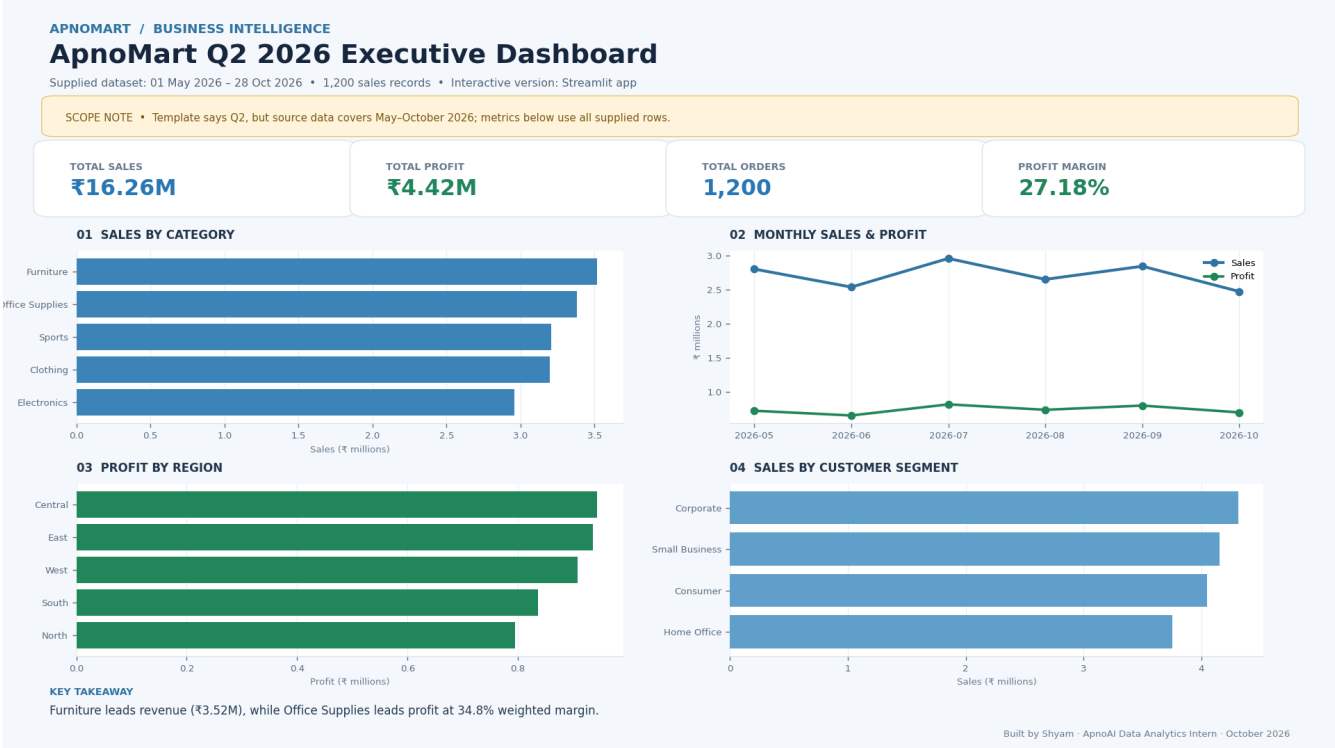

Strategic recommendation

Run a margin-protection pilot before increasing broad discount spend. Start with Electronics (lowest weighted margin: 18.88%), audit the 61 loss-making orders by product, discount, region and payment method, then test selective discounts and monitor sales, profit and conversion together. Scale only after comparison with a control group. Use the

leading category and strongest month to guide inventory and campaign planning.

Dashboard snapshot

The companion Streamlit dashboard contains three views and shared Region, Category and date-range filters. Filters update KPI cards and charts. The screenshot below is a static preview for repository/submission review.

Calculated field: Weighted Profit Margin % = SUM(Profit) / SUM(Sales) × 100.
